

PVC-u Diaphragm Valves and Pressure Reducer Valves *PVC-u Membranventile und Druckminderventile*

Technical Features

- Pressure retaining valves are used where a constant back pressure is required for operating process systems. When installed as a bypass, it can also be used as a relief valve for reducing pressure peaks. Our model (DN 10-50) has an almost zero-static lower body that makes it particularly suitable for use in very high-purity water applications. The variety of available materials covers a wide range of applications.

Function

- The set spring force presses the diaphragm onto the seal seat. If the system pressure exceeds the operating pressure value, the valve opens.

Special features

- All parts that come into contact with the medium are made of highly-resistant plastics
- The control diaphragm separates the actuating drive from the flow section
- The operating pressure is adjusted with an adjustment screw and is secured with a lock nut. The setting can also be lead sealed if required
- The shape of the housing that assists flow results in good flow values
- No auxiliary energy is required in order to operate the valve
- The valve is largely maintenance-free and can be installed in any position

Technische Merkmale

- Druckhalterventile werden eingesetzt, wo ein konstanter Gegendruck zum Betrieb von Prozesssystemen erforderlich ist. Wenn es als Verzweigung installiert ist, kann es auch als Überdruckventil zur Reduzierung von Druckspitzen verwendet werden. Unser Modell (DN 10-50) hat einen nahezu statischen Unterkörper, der sich besonders für den Einsatz in Reinstwasseranwendungen eignet. Die Vielfalt der verfügbaren Materialien deckt ein breites Anwendungsspektrum ab.

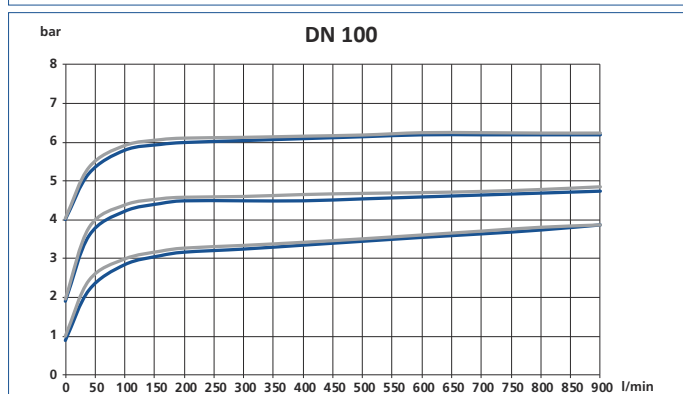

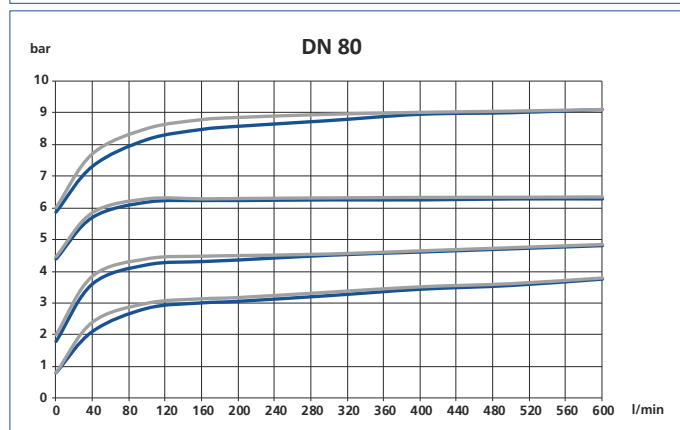

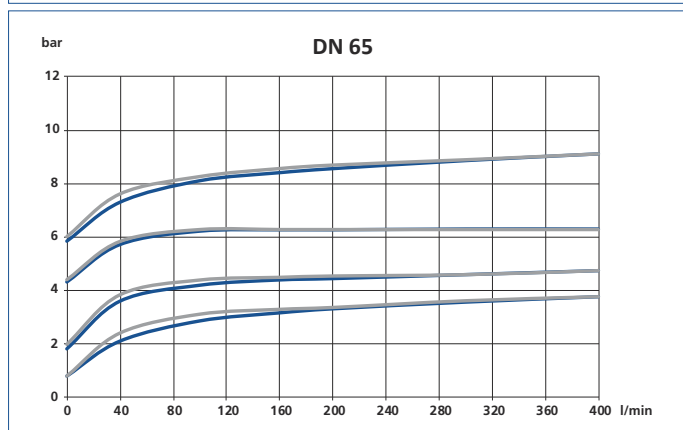

Funktion

- Die eingestellte Federkraft drückt die Membran auf den Dichtsit. Wenn der Systemdruck den Betriebsdruckwert überschreitet, öffnet sich das Ventil.

Besondere Merkmale

- Alle Teile, die mit dem Medium in Berührung kommen, bestehen aus hochfesten Kunststoffen
- Die Steuermembran trennt den Stellantrieb vom Strömungsabschnitt
- Der Betriebsdruck wird mit einer Einstellschraube eingestellt und mit einer Sicherungsmutter gesichert. Die Einstellung kann bei Bedarf auch versiegelt werden
- Die Form des Gehäuses, die den Durchfluss unterstützt, führt zu guten Durchflusswerten
- Zum Betrieb des Ventils ist keine Hilfsenergie erforderlich
- Das Ventil ist weitgehend wartungsfrei und kann in jeder Position eingebaut werden
